PRETZEL SALT

Natural rock food grade salt

Area of application

NUTRIKS Prime pretzel salt is a pure rock food grade salt with a special grain size. It is used especially for sprinkling and seasoning salty and savory bakery products or long-life baked goods to enhance both their taste and their visual appearance.

The Product

NUTRIKS Prime pretzel salt is made from naturally pure rock salt. The special grain size of 1.6 - 0.8 mm makes it particularly suitable for use in shelf-stable baked goods, such as salty snacks, rusks, pretzels, and crispbread.

- **Special grain size**
- **Natural**
- **No additives**
- **Particularly crystalline structure**
- **Low CO₂ footprint of our rock salt products and manufacturing processes**

PRETZEL SALT

Product quality

The formation of K+S rock salt began 250 million years ago in the primeval sea. When the primeval Zechstein Sea evaporated, the purest salt was left behind. It is characterized by its naturally high proportion of pure white crystals. NUTRIKS Prime pretzel salt meets the requirements of the Codex Alimentarius and the FCC. We guarantee consistently high product quality through continuous quality controls and full traceability.

Certification

K+S is certified according to FSSC 22000 and EN ISO 9001. A comprehensive HACCP system ensures compliance with hygiene requirements. Kosher and Halal requirements are met.

Our Service

We provide our customers with products of consistently high quality. If required, we support our customers with competent technical application advice. A high level of reliable worldwide delivery is realised through effective and intelligent logistics by truck, vessel or rail.

Delivery range

Packaging size:	25 kg bag (40 × 25 kg per pallet)
-----------------	-----------------------------------

Type of packaging:	PE-bag
--------------------	--------

Composition:	Rock salt without additives
--------------	-----------------------------

Grain size:	1.6 – 0.8 mm
